Assignment 0209 Feedback

Lisa Rosenbaum

(updated feedback based on commits up to September 20 commits)

2a — Easing functions are great, and background + internal animation are now working as specified. (+)

4a — Code is compiled and function. There are slight, nonfatal glitches like a couple of missing semicolons, but otherwise things are clean. (BTW JSLint would have caught these issues) (+)

4b — Very nominal comments seen on added/modified sections. (/)

4c — Code is indented in a way that makes it pretty readable, but spacing is a little too tight (especially the easing code). Refer to JSLint to get some good spacing advice. (|)

4d — Good that you have now worked this out. Keep on seeking out information or help as needed! (+)

4e — More recent commits show good frequency. Messages are generally OK with the occasional too-short one (e.g., a couple of messages are solely “edited”). Try to improve on message descriptiveness in commits for future assignment submissions. (|)
